CASE STUDY: EDUCATION

Creative thinking scores revenue and efficiency gains for PK-12 school

The Client

Collegiate School is a PK-12 college preparatory school founded in 1915.

The Challenge

As a dynamic and growing school, Collegiate was seeking new ways to bring in revenue and save costs without relying solely on tuition increases. After a series of successful automation projects, Controller Jennifer Quindoza set out to automate accounts payable—a seemingly difficult task. When she learned that Paymerang, unlike other solutions, was quick to implement, proven to actually reduce the work of AP, and designed to be profitable immediately, she was skeptical. Since there was no commitment or upfront investment, she decided to give it a try.

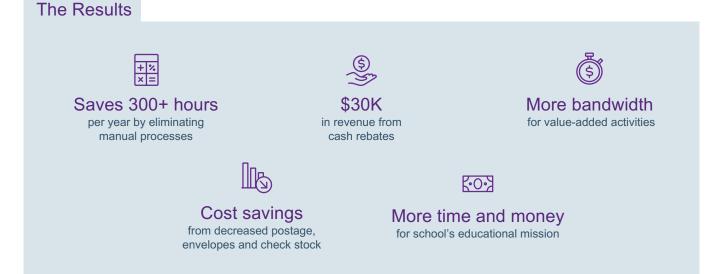

The Solution

Collegiate implemented Paymerang and began to notice the benefits instantly. In addition to saving time on the weekly check run, Paymerang drastically simplified the bank reconciliation process and allowed her to securely approve check batches electronically rather than in person. Now several years into the program, Collegiate is thrilled with the annual rebates, time and cost savings, reduced overtime and increased bandwidth for value-added activities. Partnering with Paymerang is helping Collegiate fulfill its mission as an educational institution.

"Paymerang is exactly what it says it is—free money with no hidden fees and no commitment. We have added a revenue stream while becoming more automated and efficient. As a school, that's a big deal for us because that's more money we can spend on our instructional programs."

- Jennifer Quindoza, Controller
